

State Judicial Solutions

Broadcast arguments and rulings online

Judiciary transparency means providing access to the arguments of a proceeding and the decisions handed down by the court. Many have begun webcasting their proceedings online to appease public demand, provide a better understanding of the judicial process, and serve as an alternative to traveling to the court to attend in person. But when considering bandwidth consumption, staff time, and rapidly changing technology trends, it can be overwhelming and costly for judiciaries to maintain webcasting internally.

Granicus delivers the highest-quality, feature-rich webcasting solution for government entities of all types. With over 10 years of experience, Granicus has the expertise to help courts create better accessibility and deliver webcasting technology efficiently, while providing the most complete record of oral arguments to the public.

Feature-rich webcasting solutions for courts

- **Increase access with a searchable library of oral arguments**
Empower the public to find the information they need through a searchable public record on your website. All audio, video, case summaries and opinions are tightly integrated into a single experience. With advanced search capabilities, retrieve only the information needed.

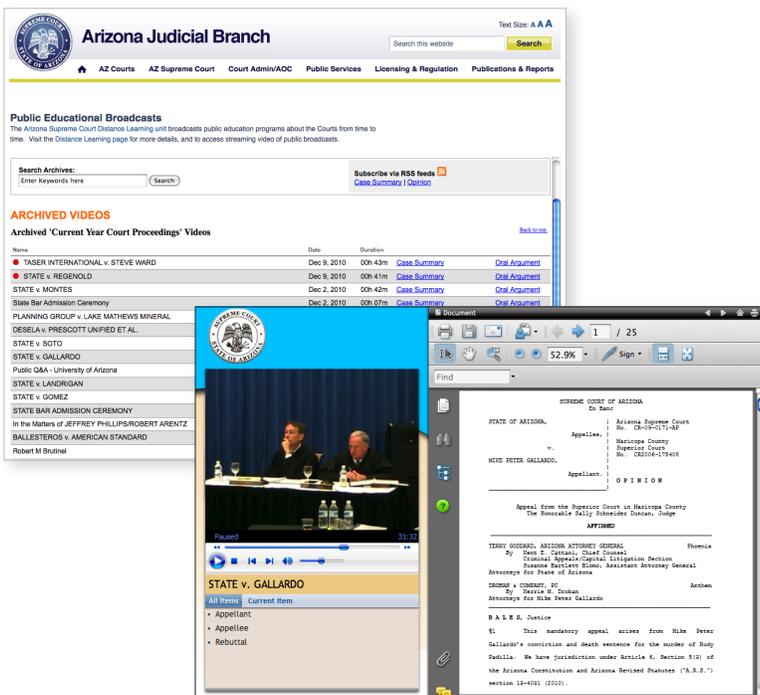

Provide greater access to justice with searchable, online records of arguments

- Deploy the most feature-rich streaming media platform for government quickly and easily
- Simplify media management - schedule arguments to broadcast live or record from any video source
- Give the public convenient access to proceedings online and allow them to participate remotely
- Index video to case summaries, opinions, and other relevant data
- Reach a broader audience with mobile streaming and podcasting

- Ensure accessibility guideline compliance with closed captioning**
 Webcast court proceedings with scrolling closed captions for live and archived videos. Access and publish a full transcript and search for any word spoken on video.
- Deliver high-quality video to the public through your website and over mobile devices**
 Granicus supports multiple streaming formats – H.264, Silverlight, Flash, HTML5, and HD to deliver the highest quality video to your viewers. Media files can also be delivered as downloadable podcasts, audio (MP3) and video (MP4) formats.
- Simplify media management with an automated system**
 Schedule events to broadcast live or record from any video source including cable, camera, or DVD. Archived files automatically transfer to internal and external distribution networks and are instantly published to the web.

Features for Staff

- Publish Case Summaries & Opinions
- Live Webcasting
- Index Video Live
- Archived Video Editing
- Automated Publishing
- Link Relevant Documents
- Media Repository
- Report on Viewership
- Unlimited Storage
- Intelligent Media Distribution
- Proactive Systems Monitoring
- Guaranteed Availability & Security

Combine webcasting with case summaries or opinions to create the most complete record of public hearings

Secure, world-class infrastructure built exclusively for government webcasting.

- **Unparalleled webcasting performance and reliability.**
Reduce the burden on IT staff by leveraging a world-class hosted infrastructure and an on-site media server, backed by a comprehensive maintenance program.
- **Unlimited bandwidth, unlimited storage, and intelligent routing**
Store files redundantly and intelligently route media to avoid unnecessary congestion on your network. Optimal streaming quality, speed, and reliability are guaranteed. Get permanent storage, backups, systems monitoring and dedicated Tier 1 support.
- **Measure and analyze public interest with a reporting dashboard**
Easy-to-use reporting tools and charts help you conduct real-time and historical analysis of visitor statistics: most popular content, number of live and archived views, length of time on site, and ratio of citizen to staff use.

Benefits to Citizens

- Share & Embed Videos
- Searchable Closed Captioning
- Web Portal
- Advanced Search
- Flash, Silverlight, HTML5 Video Players
- Downloadable Formats (MP3/MP4)
- Handheld Mobile Device Support
- iTunes Integration
- RSS Feeds
