

# Information Technology

Government IT as a service delivery platform

## Fast Facts

- **2,000+** government IT professionals successfully use Granicus
- **5+ million** government records and media files are currently managed in the Granicus cloud
- Granicus has delivered **140+ million** government webcasts and currently hosts **390 terabytes** of data

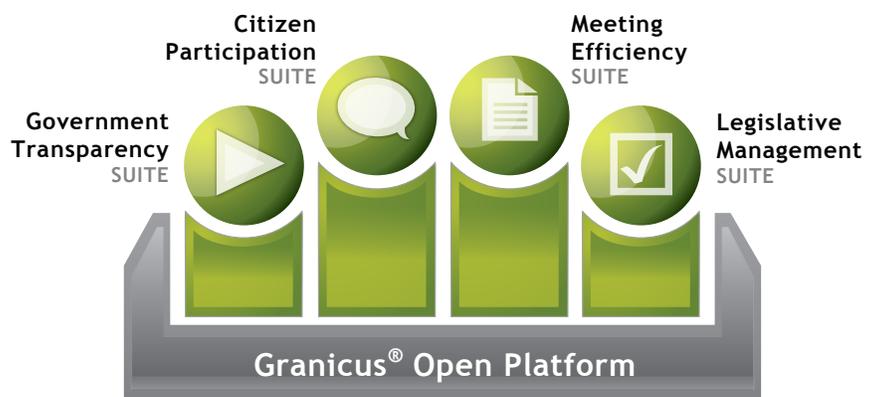

## How can you benefit?

Government Information Technology has evolved from being a support department to being the core of all data distribution and workflow management. It's time to start thinking of government IT as a critical service platform, providing data, reporting, meeting efficiency, citizen collaboration, and more. It should also be the primary strategy for increased cost-efficiency and responsiveness. Government data has three critical needs. It needs to be secure. Applications need maximum uptime. Systems also need to be monitored, maintained, and regularly improved. Granicus specializes in helping government IT achieve all these demands. Our goal is to help you become world-class efficiency and service providers.

“Using Granicus technologies, we were able to create a powerful web environment for finding legislative info and viewing integrated streaming video.”

- Steve Kriegish,  
Director of Legislative IT  
Tennessee General Assembly

Learn why our cloud-based platform for government is becoming the top choice for IT decision-makers.

## Benefits

### Exceed government service delivery demands.

Government IT is always striving to deliver top quality public services. With Granicus you can exceed your agency's goals of improving transparency, legislative efficiency, and community engagement using the latest technologies that are proven and trusted by government – including, streaming video, comprehensive legislative automation, a paperless agenda iPad app, and powerful citizen collaboration tools. These industry leading tools are recognized for helping government enhance service delivery while maximizing cost-efficiency.

### Automate workflows and drive efficiency.

Give your entire enterprise the tools they need to run more efficient workflows for public meetings, agenda management, record-keeping, and citizen engagement. Our workflow-driven solutions are completely automated and digital, helping you to reduce dependency on manual, paper-based, time-consuming processes. They also empower users to capture, manage, track, and deliver government information, including legislative files, public records, videos, and citizen input, with the highest levels of speed and efficiency.

### Cut costs and boost efficiency in the cloud.

Government IT teams want to run innovative, smart, and secure operations without taxing their budget or resources. Granicus solutions can help you achieve this while actually *cutting* costs. Our world-class cloud platform is proven to help governments deliver innovative applications faster while saving staff time and money. With Granicus solutions, our skilled team of network, database, and systems engineers monitor, maintain, and support your systems around-the-clock. Plus, you get unlimited bandwidth, unlimited usage, and unlimited storage included in your low monthly subscription price.

### Deliver high accessibility and mobility.

Providing ease of access to government data is essential. Granicus product suites are designed to maximize the accessibility and usability of your data. We have an open architecture and API to integrate with your existing systems. We ensure

your content is indexed, searchable, sharable on social networks, and RSS-enabled. We also ensure your video content is available in multiple formats such as Flash, HTML5, and Silverlight to help you reach the broadest possible audience regardless of the computer or mobile device they are using.

### Rely on secure disaster recovery plans.

Continuity of government services has never been more important. Natural disasters and other unforeseen emergencies necessitate an immediate government response. Granicus' cloud data storage, management, data recovery, and multi-location backups, ensures your content is safe and equips you to respond to business disruptions faster and easier. Additionally, our data centers have a 99.98% uptime track-record to ensure your content and applications are highly accessible.

## Recommended Solutions for IT
