

Granicus Records Management

Address the full life cycle of the recording process

Granicus Records Management is the next evolution of making the clerk and recorder's office an ever-more efficient gateway of public information and day-to-day business, helping automate government records offices with a streamlined, centralized application.

Many of the first-generation technologies that were deployed to handle these processes have become outdated and are a pain point for clerks. The Granicus Records Management software addresses the full life cycle of the land (deeds, titles, etc.) and vitals (birth, marriage or death certificates) records processes, including the ability to handle eCommerce transactions and court case eFiling.

The open architecture design allows for implementation and seamless integration with other departments or software solutions, including third-party enterprise imaging and workflow systems.

About Granicus, Inc.:

Granicus provides the industry's leading cloud-based solutions for government efficiency and transparency, with software that helps more than 1,100 organizations and 63,000 government staff members streamline their workflows and establish more meaningful connections with citizens — online, over social networks, and mobile devices. Granicus' solutions include live webcasting of public meetings and video archival, complete agenda and legislative management software, records management applications, tools for automating boards and commissions management processes, as well as in-meeting mobile solutions for elected officials and online feedback platforms for citizens.

Key Granicus Records Management Features

-  Robust information input and retrieval for land and vitals documentation
-  Highly configurable; easily customizable
-  Full transaction audits
-  Index accuracy tracking
-  Interactive dashboards
-  Adjustable document workflows
-  Integration with court case eFiling module (eUniversa), public lookup (ROAM) and eCommerce tool (eAccept)

An end-to-end solution for clerks and recorders

Granicus understands the unique challenges facing government agencies at all levels. By providing software that creates streamlined processes, staff can become more efficient in processing customer requests, saving time, money and effort for both parties.

Land and Vitals

- Streamlined end-to-end solution for county clerks and recording offices of all sizes for titling, deeds, liens, DBAs, etc.
- Property Records Industry Association compliant
- Access and create all documents involved in marriage, death and birth certificate processes
- Integrates with all major third-party filing systems

ROAM

- Instant access to public and secure information
- Robust, fast information retrieval
- Plug and play architecture easily integrates with third-party data applications
- Web interface compatible with all major web browsers
- Allows for custom public-facing portals with eCertification to certify documents and pay for them through eAccept.

eUniversa

- Electronic case filing for submitting court documentation
- Enables filers, like a lawyer, to transmit documents from their office
- Ability for Clerk to review and approve eFiled information
- Interfaces with many Case Management and Document Management systems

eAccept

- Enhance and enable more options for payment
- Add-on module for Land and Vitals software and ROAM lookup
- Offers a complete audit trail, backed by a PCI-compliant data center
- Daily transaction reconciliation with check printing

“ The system has increased our level of customer service. It’s a full-functioning system that our staff likes to work with and works well in. It works and it provides good, expedited service for our customers. ”

- David Valenzuela

Clerk and Recorder Division Manager, Ventura County, Calif.
